SUBJECT: Milestone Five Memo

The first thing we are going to declare is that we hate svn so much. We have to fix it every time we commit things. Hi, Sid. Before you moving on to next line, please read the above line three times and start to think about why cannot we use Git. Our design is good. During this milestone, all we did is coding and debugging which was not fun. We got most parts to work, but not all of them. We will make sure everything work on next milestone. We have completed our integration tests, and things are looking swell in the future for our group. We have a good amount of work ahead of us, but for the most part it is just technical now. Also, did you know that polar bears have 42 teeth??? Pretty nifty, huh?

Love,

This Group Slightly Above Average Group (formerly, "This Group, Average Group" :c)
